Give your next animatronics or robotics project eyes with this Snake Eyes Bonnet Pack for Raspberry Pi. The Snake Eyes Bonnet is an accessory for controlling TFT LCD displays and also offers four analogue inputs

**Product number** ADA3813

**Weight** 0.085kg

## Product description

Give your next animatronics or robotics project eyes with this **Snake Eyes Bonnet Pack for Raspberry Pi**. The Snake Eyes Bonnet is an accessory for controlling TFT LCD displays and also provides four analogue inputs for sensors. It's perfect for making cosplay masks, props, spooky sculptures for Halloween, animatronics, robots .... anything you want to add a pair of animated eyes to!

We've recently added some very fancy 1.54" TFT displays with high density 240x240 resolution and full angle IPS viewing. Basically, they have the image quality of an OLED but the price of a TFT - and 4x as many pixels as either! Perfect for stunning good-looking eyes.

**We really only recommend pairing with a Raspberry Pi 3 or 4.** These high-density displays have a lot of pixels to push and the quad-core Pi 3/4 will help keep the frame rate high and flicker-free.

### This package includes:

- Adafruit Animated Eyes Bonnet for Raspberry Pi
- Premium female/female jumper wires - 40 x 12" (300mm)
- 2 x Adafruit 1.54" 240x240 Wide Angle TFT LCD Display with MicroSD

### Note: Raspberry Pi not included.

Some through-hole soldering, assembly and coding is required. For full details on how to use this Bonnet, check out the [tutorial](#) which includes code, diagrams and some creative ideas on how to use it!

## Product properties

**Gross Weight (kg)** 0.085

**Country of Origin** USA

**Brand** Adafruit

**Product ID** ADA3813

**Manufacturer ID** 3813

**Compatibility** Raspberry Pi 4B, Raspberry Pi 3B+, Raspberry Pi 3B, Raspberry Pi 5

**EAN** 9501448154498

**Zolltarifnummer** 85285900
