Product description

This is a jumper adapter cable pre-terminated with a female Qwiic JST connector at one end and female connectors at the other. The cable insulation is made of a highly mouldable material, making it more flexible than our original Qwiic cable, especially in tight spaces or enclosures. With this cable, you can easily connect components with a Qwiic connector to the male pins of various development platforms. This cable is also a good way to connect a logic analyser to your I2C system.

The length of the 28AWG cable is 150mm (approx. 5.9 inches). The wires of the adapter are colour coded in red, black, blue and yellow. In addition, the Qwiic socket has a basic pitch of 1mm, while the female connector pins can be easily connected to a standard 0.1" plug.

All Qwiic cables have the following colouring and arrangement:

- **Black=GND**
- **Red=3 .3V**
- **Blue=SDA**
- **Yellow=SCL**
